

Facebook Clone

Follow below step to set up Facebook Clone code in ionic 3.

1) Install Ionic and Cordova

- To install Cordova, make sure you have Node.js installed, then run
- \$ sudo npm install -g cordova
- \$ sudo npm install -g ionic

2) Create Ionic 3 Project

- \$ ionic start FacebookClone
- Also you can unzip my folder and
- Goto my project folder and

Add platform

- \$ ionic cordova platform add android
- \$ ionic cordova platform add ios
- Note: if about command through permission error then use sudo before command. - Goto to project and run \$ npm install command(this command for install npm lib those are use in project)

3) Firebase Setup

❖ Create Firebase Account

- <https://firebase.google.com/>
- You can use your gmail account.

4) Add Firebase Api key

- Open 'login.ts' file (src/login.ts)
- Change all const value
 - `firebaseConfig`

- `facebookAppId`
- `googleClientId`
-
- **5) Firebase setup**
 - Follow this set from 1st document (`facebookclone.pdf`)
